Logic Design Corporation Announces the Release of “Global Edge® 10.0 – Enterprise / Workgroup” Software

—Global Edge Provides Manufacturers the Power to Succeed in a Global Market—

PEWAUKEE, Wisconsin—December 23, 2004—Logic Design Corporation, the leader in Product Lifecycle Management software for “Design / Build-to-Order” discrete manufacturers, announced today the release of *Global Edge® 10.0 – Enterprise / Workgroup Editions*. *Global Edge® 10.0* is fully XML / Web Based product version that automates the process of Sales Quoting, Product Configuration, Bill of Materials / Routings, Drawing Generation, Part Check-Out, Cost Roll-Ups, Document Vaulting and CAD / ERP Integration.

Global Edge® automates the process of configuring simple to complex, standard and custom products by drastically reducing the time spent calculating bill of materials and routings, generating CAD geometry and producing fast accurate price quotes. *Global Edge®* starts with the design of the product by integrating CAD with ERP to provide a real-time engineering data warehouse that serves as a foundation for enterprise collaboration to easily share accurate real-time product information company-wide. *Global Edge®* helps speed the processing of orders through engineering to manufacturing while simplifying the enterprise management of documents, engineering changes, version control, projects and jobs. *Global Edge®* quickly adapts to most product lines and allows your engineers to engineer rather than spending their time doing clerical work.

About Logic Design Corporation

Logic Design Corporation, founded in 1983, headquartered in Pewaukee, Wisconsin, is a developer of innovative software solutions for engineering and manufacturing. For more information, visit www.ldcglobal.com
