

LDC Announces Release of Global Edge® 10.0 – SolidWorks 2006 CAD Interface

PEWAUKEE, Wisconsin – May 13, 2005 – Logic Design Corporation, a full service engineering and manufacturing consulting firm, announced today the release of **Global Edge® 10.0 – SolidWorks 2006 CAD Interface**.

The **Global Edge® 10.0 – SolidWorks 2006 CAD Interface** provides a dynamic, “Real-Time” two-way product data link between **SolidWorks 2006** and most ERP / Accounting systems. As new products are designed, or existing products are modified, **Global Edge** provides an automated real-time link to synchronize product bill of materials information between **SolidWorks** CAD drawings and ERP. **Global Edge** eliminates the manual retyping of the bill of materials and routing information into the ERP system. Existing parts are easily found and reused instead of creating massive and expensive duplication of data and effort. As new parts and assemblies are created or modified in engineering, this information is dynamically updated and is made readily available at the enterprise level. Any customized changes are automatically updated in the assembly with the material and process costs re-rolled up and automatically updated back to ERP. **Global Edge** improves information accuracy throughout the quoting and design process and eliminates retyping information from **SolidWorks** CAD drawings back to ERP or vice versa.

About Logic Design Corporation

Founded in 1983, Logic Design Corporation is a full service engineering and manufacturing consulting firm that specializes in innovative solutions to help manufacturing companies increase productivity, reduce costs, and streamline operations. We help transform engineering and manufacturing by helping you to incorporate the best suited technology that has resulted in dramatic improvements for our customers. The expert consultants at Logic Design Corporation who possess an average of over 20 years of engineering and manufacturing experience can help your company achieve your goals in a cost effective, smart incremental approach.
